 **LinkedIn:** [linkedin.com/in/lequocanhtr/](https://www.linkedin.com/in/lequocanhtr/)  **GitHub:** github.com/Al0ngsy

Gender: Male **Date of birth:** 01/11/1995 **Nationality:** German

ABOUT ME

Backend Software Engineer with over six years of experience in developing distributed microservice architectures and cloud-based SaaS applications. Strong focus on TypeScript, NestJS, and PostgreSQL, as well as the design of high-performance RESTful APIs and scalable backend systems. Experienced in building and evolving complex platforms with broad ownership across multiple backend domains, including payment integrations, authentication, reporting, public APIs, CMS systems, CI/CD infrastructure, and database-level performance optimization. Additionally experienced in AI-powered applications using LangChain, OpenAI, and Retrieval-Augmented Generation (RAG).

EDUCATION & TRAINING

[01/04/2022 - 30/09/2024]

M.Sc. Media Informatics (not completed)

Technische Universität Berlin

Focus Areas:

- Image and video processing (creation, encoding, automated analysis)
- Media systems and networks (web technologies, cloud and fog computing)
- Media and information law

[01/10/2016 - 31/03/2022]

B.Sc. Medieninformatik

Technische Universität Berlin

WORK EXPERIENCE

[01/07/2024 - 31/08/2026]

simpleTechs GmbH

Software Development Engineer

- Designed and implemented a REST API microservice for an AI service using NestJS, LangChain, and the OpenAI API, including Retrieval-Augmented Generation (RAG), embeddings, pgvector, and tool/function calling.
- Designed and implemented an optimized migration process for PostgreSQL production databases after long-standing deadlock issues affected system stability and maintainability. Developed a solution with automated schema reconciliation, change tracking, and performance optimizations, significantly reducing downtime and improving migration reliability.
- Contributed backend features to an existing gold trading platform (FlexGold) using NestJS, including business logic, RESTful APIs, and integration with external systems.
- Continued development and maintenance of the B2B SaaS VOD platform backend, including payment services, partner APIs, and database optimizations.
- Designed and implemented a prototype for an options trading platform using the Alpaca Trading API and Prisma ORM, including database design, a microservice backend, and a monitoring dashboard.
- Developed automated unit tests using Jest to ensure quality across authentication, payment, and backend services.
- Created and maintained Dockerfiles and Bitbucket pipelines for CI/CD processes and supported Kubernetes deployments using Helm.

Working Student – Software Development

Ongoing development and feature work on the backend service stack of a SaaS video-on-demand platform for multiple B2B clients, including:

- Content Management Dashboard (CMS): Further development of a React Admin-based CMS, including automated content ingestion from AWS S3 and metadata workflows.
- Payment Services: Development and maintenance of event-driven payment workflows using webhooks and Google Pub/Sub (Google IAP) for PayPal, Stripe, Apple IAP, Google IAP, Amazon IAP, and Roku IAP, supporting SVOD and EST/TVOD business models with over 100,000 transactions per year.
- Database: Extension and maintenance of database schemas, data modeling, development of high-performance database functions, and optimization of SQL queries and indexes.
- Reporting: Development of operational and business reporting features.
- Public Third-Party API: Design, development, and maintenance of a RESTful feed API for external partners (including Samsung and Waipu).

SKILLS

Areas of Expertise

Microservice architectures | Backend development | RESTful API design | Event-driven architecture | Database design | Performance optimization | CI/CD | Cloud applications | Payment integrations | AI-powered applications

Technologies

TypeScript | JavaScript | Node.js | NestJS | React | React Admin | PostgreSQL | Prisma ORM | pgvector | REST APIs | LangChain | OpenAI API | Docker | Helm | Bitbucket Pipelines | AWS S3 | Kubernetes | Git | Jest

LANGUAGE SKILLS

Mother tongue(s): Vietnamese

Other language(s):

German

LISTENING: C2 **READING:** C2 **WRITING:** C1

SPOKEN PRODUCTION: C2 **SPOKEN INTERACTION:** C2

English

LISTENING: C1 **READING:** C1 **WRITING:** C1

SPOKEN PRODUCTION: C1 **SPOKEN INTERACTION:** C1

HOBBIES AND INTERESTS

AI Technologies & Generative AI

Exploration and hands-on application of modern AI technologies, including running and testing local large language models (LLMs), generative AI workflows, and creative AI applications such as image generation using ComfyUI.

Game Programming

Exploring game design and development using Unreal Engine, including C++ programming and Blueprint visual scripting.
